Subject: Question regarding your Rolff Lake and Sheldon Dome production wells

Marvin -

A few clarification questions -

1) How many producing wells does Phoenix have associated with each of these fields

2) Please list all activities occurring at each of the wells which will be contributing produced water (e.g. hydraulic fracturing, acid jobs, biocide application, corrosion inhibitor application, etc).

3) Does Phoenix treat flowback water differently than production water? If so, how? If you do treat flowback water differently than production water, how do you make the determination that flowback water has transitioned to produced water? Does Phoenix collect baseline water quality data for flowback water to help in making this determination?

Thanks -  
Elaine
